

Hi,

Thanks for sharing the full MVP requirements — this gives a clear picture of the platform vision, including the submitter portal, journalist portal, admin dashboard, and payment system.

I can build this MVP version of Carib Newswire within **16 days**. The total cost for this will be **\$250**.

Here's what I will cover in this scope:

- Press submitter system (signup, login, submit press releases)
- Basic payment integration (Stripe)
- Admin dashboard (approve/reject/edit/feature releases)
- Public newsroom (featured + recent listings)
- Journalist portal (signup, browse, basic filters)
- Basic email digest setup

Technical stack:

- **Next.js** for frontend (fast, SEO-friendly)
- **Node.js** for backend (scalable and modular)

Note:

- Hosting and deployment will be **provided by you**, and I will handle full setup on your server.
- This will be an **MVP version**, focusing on core functionality with clean UI and scalable structure for future upgrades.

Let me know if you'd like me to proceed — I can start immediately.
