

1. Scope & Change Requests (FIXED) Replace "Scope Freeze" with:

A scope freeze will apply after FRD approval; however, minor adjustments and clarifications (up to 10–15% of scope effort) will be accommodated without additional charges, provided they do not significantly alter core functionality.

All major changes will require a mutually agreed Change Request, including clear cost and timeline impact, approved in writing before implementation.

2. Acceptance Criteria (CRITICAL FIX)

A feature will be considered "Accepted" only if it meets:

1. Functional requirements defined in the FRD
2. Usability standards (reasonable user experience without critical friction)
3. Performance benchmarks (pages load within agreed time, no major lag)
4. No critical or high-severity bugs

Client reserves the right to request fixes for any issues identified during testing before final acceptance.

3. Code Ownership & Access (CRITICAL)

The developer will maintain the project in a shared repository (e.g., GitHub/GitLab), with access granted to the client throughout the development lifecycle.

Full administrative access to all systems will be granted upon final payment.

4. Refund Policy (BALANCED)

1. If the developer fails to deliver agreed functionality for a milestone, the client may withhold payment for that milestone until resolved.
2. A full refund applies if the product is non-functional and unusable.

5. Warranty Period (EXTENDED)

1. The developer will provide a 60-day warranty period after final delivery.
2. During this time, all bugs and deviations from the FRD will be fixed at no additional cost.
